

# Git Commands Cheat Sheet

## Git Commands Cheat Sheet

=====

### 1. git init

- Initialize a new Git repository in the current directory.

### 2. git clone <repo\_url>

- Clone an existing repository from a remote source (e.g., GitHub) to your local machine.

### 3. git status

- Show the working directory status, including staged, unstaged, and untracked files.

### 4. git add <file> or git add .

- Stage files for the next commit. `git add .` stages all changes in the current directory.

### 5. git commit -m "message"

- Commit staged changes with a descriptive message.

### 6. git log

- View the commit history.

### 7. git branch

- List all local branches.

### 8. git branch <branch\_name>

- Create a new branch.

### 9. git checkout <branch\_name>

- Switch to the specified branch.

### 10. git switch <branch\_name>

## Git Commands Cheat Sheet

- Alternative to checkout to switch branches.

11. `git switch -c <branch_name>`

- Create and switch to a new branch.

12. `git merge <branch_name>`

- Merge the specified branch into the current branch.

13. `git pull`

- Fetch and integrate changes from the remote repository into your current branch.

14. `git push`

- Push committed changes from your local branch to the remote repository.

15. `git push -u origin <branch_name>`

- Push a new local branch to the remote and set it to track the remote branch.

16. `git remote -v`

- List the current remote connections.

17. `git remote add origin <repo_url>`

- Link your local repo to a remote repository URL.

18. `git fetch`

- Download objects and refs from another repository without merging.

19. `git diff`

- Show changes between commits, branches, or working directory and staging area.

20. `git reset <file>`

- Unstage a file from the staging area.

## Git Commands Cheat Sheet

21. `git rm <file>`

- Remove a file from the working directory and staging area.

22. `git clean -f`

- Remove untracked files from the working directory.

23. `git stash`

- Temporarily save changes that are not ready to be committed.

24. `git stash pop`

- Apply stashed changes and remove them from the stash list.

25. `git branch -d <branch_name>`

- Delete a local branch.

26. `git push origin --delete <branch_name>`

- Delete a remote branch.

27. `git tag <tag_name>`

- Create a tag (like a version marker) on the current commit.

28. `git show <commit_hash or tag_name>`

- Show details about a commit or tag.

29. `git revert <commit_hash>`

- Create a new commit that undoes changes from a previous commit.

30. `git config --global user.name "Your Name"`

- Set your Git user name globally.

31. `git config --global user.email "you@example.com"`

- Set your Git email globally.

## Git Commands Cheat Sheet

32. `git log --oneline --graph --decorate --all`

- Show a condensed, graphical view of the commit history.

33. `git blame <file>`

- Show who last modified each line of a file.

---

These are the most common Git commands used in daily workflows, from initializing repos, working with branches, collaboration, to cleaning and managing history.
